BENEFITS

- Native mobile Maximo Inspections app provides transparent online/ offline function powered by the Mobile Informer platform
- Allows users to conduct Maximo inspections even while offline
- Installs quickly and remotely for immediate productivity gains
- Paper-based inspections can be phased out completely
- Inspectors can minimize office visits
- Simple user interface designed specifically for Maximo Inspection activities encourages 100% user acceptance
- Leverages full range of hardware capabilities including photographs, barcode scanning, and biometric authentication
- Supports multi-language Maximo implementations

IBM Maximo Asset Management Work Centers are dynamic visual dashboards that allow users to view role based information from existing applications. The Inspections Work Center is a powerful tool used for creating inspection forms. With the release of the Mobile Informer Inspections Application for Maximo, you can now take your inspections wherever you go.

Interloc's Mobile Informer Inspections app now makes it possible to perform inspections based on the Inspections Work Center, even in a fully disconnected environment. Mobile Informer's seamless transitions between online and offline usage ensure that inspection data is kept up to date. Even if the device is offline, inspections can continue, uninterrupted, with no loss of features or data, and no degradation of performance.

Put the Power of the Inspections Work Center in Your Users' Hands

With the Mobile Inspections app, you can:

- View assigned inspections and details
- Search assigned inspections by:
  - Asset/Location number and description
  - Inspection Form name and number
  - Work Order number and description
- Complete assigned inspections
- Create an unscheduled inspection

FEATURE LIST

- View inspections by work order, route, asset, or location
- Scan an asset or location to search for and start inspections
- Save partial inspections for completion later, even by another inspector
- Capture meter readings, including operator rounds
- Mark up photographs prior to upload
- Capture signatures via touchscreen
- Offline-first architecture ensures full performance and data availability, even if disconnected.
- Supports both planned and ad hoc inspections
- Suitable for inspections, assessments, audits, reports, safety analysis, and surveys

About Interloc

Interloc Solutions is an IBM Gold Business Partner that provides innovative consulting and managed services, as well as unique mobile solutions to make your business successful. From mobility to Cloud to smart devices, Interloc is 100% dedicated to helping you realize the greatest potential from your Maximo investment.

Inspections - Paper = Improved Efficiency

Mobile Inspections is a simple, turn-key, out-of-the-box Mobile Inspections app that's completely integrated with Maximo and powered by the Mobile Informer platform. Informer Inspections was designed from the ground up specifically for the IBM Maximo Inspections Work Center.

Maximo's Inspections Work Center supports performing inspections for maintenance, assessments, audits, reports, safety analysis, and surveys. Not only will Informer Inspections remove the paper from your process, but the streamlining of the entire inspections process can increase inspection rates by as much as 50%.

100% User Acceptance

Mobility promises improved productivity and increased ROI, but those gains are only fully realized when your maintenance workforce embraces a mobile solution. Mobile Informer apps are native apps, meaning they provide all of the mobile device features your users are familiar with – enhancing the user experience and ultimately driving the highest level of user adoption.

Informer Inspections is designed to be intuitive and provide engagement, adoption, retention and task success. This allows your users to focus on their work, rather than learning how to navigate a new tool. In fact, many Mobile Informer users are unaware they are interacting with Maximo at all!

Powered by the Mobile Informer Platform

Installed as a Maximo application, the Mobile Informer platform delivers reliable data synchronization with unparalleled performance. Mobile Informer customers transfer millions of records flawlessly, with tens of thousands of work order transactions daily.

Other benefits of the Mobile Informer platform include:

- Administration performed within Maximo, including user and device management.
- Powerful user and device management tools for total control
- Affords the highest security, supporting multi-factor authentication
- Employs IBM best practices, including the use of Maximo Integration Framework (MIF) web services and Maximo Business Objects (MBOs)
- Designed to make your Maximo upgrades painless and straightforward
- Can be deployed quickly and remotely in collaboration with your IT department
